

AGENDA MEMO

11/3/2020 Agenda

TO: Honorable Mayor and City Council

FROM: Jodie Ledat, Operations Manager

SUBJECT: Update on the City's Storm Water Management Program

BACKGROUND:

The Environmental Protection Agency (EPA) instituted the National Pollutant Discharge Elimination System (NPDES) in 1990 to address storm water runoff from large municipalities, construction sites larger than five (5) acres, and ten (10) categories of industrial activity. In 1999, the Texas Commission on Environmental Quality (TCEQ) assumed authority of the NPDES under the Texas Pollutant Discharge Elimination System (TPDES) and extended the permitting requirements to small and medium-sized municipalities in urbanized areas under the Phase II Final Rule. The Storm Water Phase II Final Rule, which applies to the City of University Park, is the next step in the EPA effort to preserve, protect, and improve the nation's water resources by requiring additional operators of a municipal storm sewer system to implement programs and practices to control polluted runoff.

After gaining approval from the City Council on November 20, 2018, the Public Works Department submitted the revised City of University Park Storm Water Management Program (SWMP) to the TCEQ. The City's SWMP, among other things, requires an annual update on the SWMP activity to Council and various advisory committees. This presentation will fulfill these obligations.

RECOMMENDATION:

This is a required presentation with no Council action necessary.
